## Group Meeting 10.25

Reading Phys. Rev. Lett 127, 262502 (2021)

## First Observation of the Four-Proton Unbound Nucleus ${ }^{18} \mathbf{M g}$

Hao Liu
Zetian Ma

## Result

## They assume the decay takes two steps.

$$
\begin{aligned}
& { }_{12}^{18} \mathrm{Mg} \text { g.s. } \rightarrow{ }_{10}^{16} \mathrm{Ne} \text { g.s. }+2 p \\
& { }_{10}^{16} \mathrm{Ne} \text { g.s. } \rightarrow{ }_{8}^{14} \mathrm{O} \text { g.s. }+2 p
\end{aligned}
$$

FIG 1: The Decay energy spectra for the indicated subsystems of ${ }^{18} \mathrm{Mg}_{g . s,}$, like core +p , core +2 p , core $+3 \mathrm{p}, \mathrm{p}+\mathrm{p}$. The red lines are the result from

## Result

FIG 2: Excitation energies ( $E_{x}$, in MeV ) and widths (in keV) of ground and excited states. Energies are given with respect to the ${ }^{14} \mathrm{O}$ core. [1]

[1] N. Michel, J. G. Li, F. R. Xu, and W. Zuo, Phys. Rev. C 103, 044319 (2021).

## Result

The known ${ }_{10}^{16} N e_{\text {g.s. }}$ decay is dominated by the emission of $2 \mathrm{sl} / 2$ protons.[2]

## Result

## Calculation

## The shell calculation also proved the change in levels.

|  | effective singleparticle energies | Occupation number(0+) | Occupation num |  |
| :---: | :---: | :---: | :---: | :---: |
| $1 d_{5 / 2}$ | 2.72 MeV | $2.14$ | $2.40$ | +0.26 |
| ${ }_{1 S} S_{1 / 2}$ | 1.28MeV | 1.62 | 1.40 | -0.22 |
| $\begin{array}{ll} \mathrm{o} p_{1 / 2} \\ \mathrm{o} p_{3 / 2} & - \end{array}$ |  |  |  |  |
|  |  |  |  |  |
| $0 s_{1 / 2}$ | ${ }_{12}^{18} M g$ calculated by the Gamow shell model |  |  |  |

## Calculation

## The shell calculation also proved the change in levels.

|  | effective singleparticle energies | Occupation number(0+) | Occupation nu |  |
| :---: | :---: | :---: | :---: | :---: |
| $1 d_{5 / 2}$ | 2.84 MeV | 2.40 | 2.56 | +0.16 |
| ${ }^{1} S_{1 / 2}$ | 2.00 MeV | 1.29 | 1.16 | -0.13 |
| $\begin{array}{ll} \mathrm{o} p_{1 / 2} & - \\ \mathrm{o} p_{3 / 2} & - \end{array}$ |  |  |  |  |
|  |  |  |  |  |
| OS $S_{1 / 2}$ | ${ }_{12}^{18} \mathrm{Mg}$ calculated by the $\mathrm{HO}-\mathrm{SM}$ (harmonicoscillator shell model) |  |  |  |

## Calculation

## The shell calculation also proved the change in levels.

| $1 S_{1 / 2}$ | effective singleparticle energies$0.76 \mathrm{MeV}$ | Occupation number(0+) | Occupation number(2+) |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 0.27 | 0.45 | +0.18 |
| $1 d_{5 / 2}$ | ${ }^{-0.75 M e V}$ | 3.46 | $3 \cdot 33$ | -0.13 |
| op $p_{1 / 2}$ |  |  |  |  |
| op ${ }_{3 / 2}$ |  |  |  |  |
| $\mathrm{OS}_{1 / 2}$ | ${ }_{12}^{20} \mathrm{Mg}$ calculated by the GSM, with ${ }^{16} O+4 p$ |  |  |  |

## Calculation

## The shell calculation also proved the change in levels.

|  |  | effective single- <br> particle energies | Occupation number $(0+$ ) | Occupation number $(2+)$ |
| :---: | :---: | :---: | :---: | :---: |

## Calculation

For ${ }_{12}^{20} M g_{8}$, it doesn't make a difference between GSM and HO-SM.

For ${ }_{12}^{18} \mathrm{Mg}_{6}$, GSM performs better than HO-SM.

FIG 3: Comparison of experimental results and theoretical calculations of GSM and HO-SM.

## Calculation

FIG 4: Excitation energies of the first $2+$ states for a series of isotopes (a) and isotones (b) for Z or $\mathrm{N}=10,12$, and 14 .

## Calculation

$\mathrm{OS}_{1 / 2}-\longrightarrow$
